

Why Share Bandwidth When You Don't Have To?

BroadLINK® Gives You Private, Dedicated Connectivity for Voice, Data and Video... Affordably.

Sharing is fine for some things, but not when it comes to your communications infrastructure. Other companies will promise you high bit-rates, but few can deliver consistently. Their systems are simply over subscribed leaving you with a slow network infrastructure and frustrated users, often when they need quick access the most. Here's the good news. It doesn't have to be that way!

BroadLINK is Private and Custom-built for You.

Believe it or not, a private, custom-built wide area network (WAN) can be easier to manage, less costly, highly flexible and more reliable than traditional solutions. Especially if that WAN is powered by BroadLINK. Beyond the fact that the bandwidth you ask for is the bandwidth you get, you also get a solution that's based on your needs, not on some package a company wants to sell. We're the company that listens. So when you work with STC, private means private and custom means custom.

99.99% of the Time Your Network Will Be At the Ready.

State-of-the-art, reliable and ready. It's as close to perfect as it comes. No more worrying whether your network will be able to handle the day-to-day workload or periodic surges in demand. It can handle all of it and more. And on those rare occasions when it needs our help, we're ready too. STC is big enough to handle your most challenging needs and small enough to be there when you call. All the time. Anytime. No exceptions. Period.

"Of course the technology is important. But it's what STC does beyond the technology, the personal service, that matters too."

– Rob **Miley**
IT Manager
STC

An Excellent Track Record Starts with Exceptional Engineering.

You have a good idea what your network needs to do. Now let our qualified, licensed engineers give you the best of their experience, and design the ideal solution. We design to meet your current needs, take into account your future growth, consider existing compatibility and, of course, value engineer all along the way. The best solution is the most considered solution, not the most expensive.

BroadLINK Works with Your System.

BroadLINK can support any standards-based Ethernet traffic thanks to a transparent layer 2 Ethernet bridge. Don't worry about BroadLINK integrating with your current network infrastructure. We routinely provide traditional copper or fiber handoffs to any standard networking equipment. And don't worry about quality. You can hold us to the same industry standards we hold ourselves to, including IEEE and BICSI.

"I'm so grateful to STC for designing a system that we weren't sure was even possible given our budget. They solved a huge problem for us at a price we could afford."

- **John**
Network Security Specialist
Tucson, Arizona

Real People Means a Real Partner.

When it's time to tackle your organization's networking needs, then it's time to look at the companies that can provide that service. Price, technology and expertise are all considerations, but ask yourself which company will be a true partner? Which company stands ready with real people, not auto attendants and wait times? Which company proactively stops problems from happening? Which company guarantees 99.99% uptime, and delivers it? Which company is going to make your life easy, make your boss happy and keep your organization up and running? When you ask yourself those questions, the answer is simple. You work with STC.

STC is a telecommunications company that, since 1999, has been helping schools, government agencies, cities, towns and businesses communicate using voice, data and video. We do it by designing, installing and managing broadband wireless systems and hosted services. While we take pride in our technical achievements, the thing that we're most proud of is our personal service. We know our clients, and they know us. We keep it to that level and that's what keeps what we do real... and reliable, 99.99% reliable.
